**Re-Structure Marine Polish Wins MAATS Innovation Award**

Re-Structure Marine Products Professional Marine Polish, a new compound that uses nanotechnology to shine and protect marine surfaces, was one of six marine aftermarket products honored July 17 for innovative achievement. The awards event was sponsored by the National Marine Manufacturers Association (NMMA) and Boating Writers International (BWI) at the 8th annual Marine Aftermarket Accessories Trade Show (MAATS) at the Las Vegas Hilton Hotel

The Innovation Awards, organized by NMMA and judged by BWI, recognize those products that best meet the following criteria: innovative distinction from other products currently being manufactured; benefit to the marine industry and/or consumer; practicality; cost-effectiveness; and availability to the consumer within 60 days of the show's conclusion. A total of 60 new products were entered in eight categories for this year's MAATS awards program.

Re-Structure Marine Products Professional Marine Polish took first place in the *Boat Care/Coating/Chemicals and Maintenance Tools* category. **Re-Structure Marine Products**, explains that it was exactly the innovative nature of the compound that drew their interest in marketing it. This is a product with the potential to revolutionize the way people care for their boats."

"Judges take their jobs evaluating Innovation Award entries very seriously, spending hours reviewing and referencing submitted materials and cross-checking facts," says Jan Mundy, Innovation Awards chair and editor of DIY Boat Owner magazine. "The hands-on process at the show is equally challenging, and after products are critiqued on the exhibit floor judges begin deliberating at great lengths to select the winning entries. The variety of highly competitive products made for some stiff competition. This year's selection process was the most intense I've seen since I first began participating in the awards program."

This non-petroleum, water-based penetrating polish uses nanotechnology to clean and protect gelcoat, metal, paint, plastic, vinyl and other hard surfaces. "Easily hand applied without buffing, this product will change the way boaters maintain their boats," said Mundy.
